Overview

Playback Technologies introduces its third generation video assist single channel HD recorder, the Raptor HD+.

Capable of recording over 150 hours of high definition video for instant playback and review, the new Raptor HD+ also includes QuickMix - the latest generation of our VFX switcher.

QuickMix provides full-time HD output during VFX line-ups using a built-in chroma keyer or variable image mixer. Live camera input signals can be keyed or mixed over internally stored background plates. Plates can be recorded from a camera input or transferred to the internal hard drive using still frames or QuickTime .mov files. Background plates can be resized, positioned and cropped using this new included tool set.

Users can select HDS/SDI, HDMI, component analog and even legacy composite video as signal inputs. Battery operation is possible by allowing DC input voltages from 10 to 16vdc.

A single internal 3TB hard drive allows for recording over 150 hours of HD video. USB and eSATA interfaces allow backup to external hard drives.

The Raptor HD+ boots from an ultra-reliable solid state disk drive to ensure a near bullet-proof computer environment. An optional breakout box can replace the standard rear panel cable to help insure a robust interface to the two channels of balanced audio and all analog video I/O. A built in down-converter allows simultaneous output to standard definition composite video.

Raptor HD+

RAPTOR HD+ (3TB INTERNAL STORAGE)

OPTIONAL REAR-MOUNTED BREAKOUT BOX: \$395.00

SOFTWARE INTERFACE

Raptor HD+ Features

- Enhanced QuickMix Built In
- Simultaneous HD and SD outputs
- Blackmagic Videohub control software
- Compatible with RED Epic & Arri Alexa

Pricing

Professional net: \$7,995.00
All sales C.O.D. Factory direct only.
